INFORMATION REPORT CD NO. 25X1A  COUNTRY USSR (Orel Oblast)  DATE DISTR. 7 Peb. 1952  1. Jet Pighters Observed at Orel Airfield NO. OF PAGES 1  2. Lipture Airfield NO. OF PAGES 1  25X1A  DATE OF RENCLS. 1 25X1  ALICE COUNTRD  ANTE OF 25X1A  DO NOT CIRCULATE SUPPLEMENT TO SEPORT NO.  25X1A  DO NOT CIRCULATE SUPPLEMENT TO REPORT NO.  25X1A  DO NOT CIRCULATE SUPPLEMENT TO SEPORT NO.  1. All the jet Pighters observed at Orel (52°55: N/36°00' E) sirfield, Orel Oblast, had a container—like attachment on each wing tip.  2. Description of the containers Cigar—shaped but nore like a band. The forward and was in line with the leading edge of the wings. The container had a circular coming about 20 on in diameter at the forward end, tepered to the rear and projected beyond the leading edge of the wings to one bird of its entire length. The container had its greatest diameter (30 to 10 cm) in the first third of its entire length as soon from the front. The apparatus was from 30 to 100 cm long and was provided with assoundance paint.  3. It seemed as if the "containers were rigidly connected with the wings, since the containers were never dismandled from the jet Righter partical at the field and a droging of the containers was never observed. A snoke plume was never observed at the containers, neither at take-offs nor while the plane was aloft.  1. According to Soylet civilians, the jet aircraft observed at Orel cither flow to Lipetsk (52°20' 1/39°30' 2) or came from there. Turbine aircraft were actually observed flying at might in the direction of Lipetsk with Great and Declarated in the formal position Lipits on. The Lipetsk attributed is said to be larger than that of Great.  Attachment: Accted of jet Lighter observed at Orel.		CENTRAL INTELLIGENCE AGENCY	REPORT NO.	\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\

2. Lipetsk Arrange 25X1A  All the jet fighters observed at Orel (52°55' N/36°00' E) airfield, Orel Oblast, had a container-like attachment on each wing tip.  2. Description of the container: Cigar-shaped but more like a borb. The forward and was in line with the loading edge of the wings. The container had a circular popular about 20 cm in diameter at the forward ond, tapered to the rear and projected beyond the loading edge of the wings by one third of its entire length. The container had its greatest diameter (30 to b) cm) in the first third of its entire length as soon from the front. The apparatum was from 30 to 100 cm long and was provided with computage paint.  3. It seemed as if the "containers were rejidily connected with the wings, since the containers were never disamalled from the jet fighters parted at the field and a dropping of the containers was mover observed. A snoke plume was never observed at the containers, neither at take-offs nor while the plane was aloft.  4. According to Soviet civilians, the jet aircraft observed at Orel either flow to Lipetsk (\$2°30' N/30°30' E) or case from there. Turbine aircraft were actually observed flying at night in the direction of Lipetsk will their red position lights on. The Lipetsk airfield is said to be larger than that of Orel.  Attachment: sketch of jet lighter observed at Orel.	OUNTRY	USSR (Orel Oblast)	DATE DISTR.	7 Feb. 1952
DO NOT CIRCULATE SUPPLEMENT TO REPORT NO.  1. All the jot fighters observed at Orel (52°55° M/36°00° E) sirfield, Orel Oblast, had a container-like attackment on each wing tip.  2. Description of the container: Cicar-shaped but nore like a beeb. The forward and was in line with the leading edge of the wings. The container had a circular opening about 20 on in diameter at the forward and, tapered to the rear and projected beyond the leading edge of the wings by one third of its entire length. The container had its greatest diameter (30 to by on) in the first third of its entire length as seen from the front. The apparatus was from 30 to 100 on long and was provided with campurlage paint.  3. It seemed as if the "containers where rigidly connected with the wings, since the containers were never observed. A scale plume was never observed at the field and a dropping of the containers were reserved. A scale plume was never observed at the context were as a latter of the containers, neither at take-offs nor while the plane was aloft.  1. According to Joyiet civilians, the jet aircraft observed at Orel either flew to Lipstek (32°30° M)39°30° E) or came from there. Turbing aircraft were actually observed flying at night in the direction of Lipstein with their red position lights on. The Lipstein airclude is said to be larger than that of Orel. 1. All the jet fighters observed at Orel (52°55; N/36°00; E) airfield, Orel Oblast, had a container-like attachment on each wing tip.  2. Description of the container: Cigar-shaped but more like a bomb. The forward end was in line with the leading edge of the wings. The container had a circular opening about 20 cm in diameter at the forward end, tepered to the rear and projected beyond the leading edge of the wings by one third of its entire length. The container had its greatest diameter (30 to 10 cm) in the first third of its entire length as seen from the front. The apparatus was from 30 to 100 cm length and was provided with canouflage paints.  3. It seemed as if the "containers where rigidly connected with the wings, since the containers were never dismantled from the jet fighters parised at the field and a dropping of the containers was never observed. A smalle plane was never observed at the containers, neither at take-offs nor while the plane was aloft.  1. According to Soviet civilians, the jet aircraft observed at Orel either flow to Lipetsk (92°38 N/39°38 E) or came from there. Turbine aircraft ware actually observed flying at night in the direction of Lipetsk with their red position lights on. The Lipetsk airfield is said to be larger than that of Orel.
